

Continuing Professional Development Certificate

Global Super Tanker

Date: Tuesday 16 January 2018

Time: 1.15pm - 2.00pm

Speaker:

Jim Wheeler, President & CEO, Global Super Tanker Services LLC

In this IIL lecture Jim Wheeler outlined and discussed the modernization and expansion of aerial firefighting as an effective way of reducing losses in wildland, marine, oil platform, and rail fires. The annual cost of these fires has increased significantly in the last few years with insurers having to bear a large share. In his lecture, Jim also presented a case for rapid deployment for fires, oil spill dispersal and potential remediation.

In his lecture, Jim offered the Global SuperTanker B747-400 as something that can make a difference. Speed and volume were essential to reducing fire losses and modern aircraft with significant speed and capacity can lower the losses of devastating fire situations.

By the end of this lecture, members would have gained an insight into:

- New tools available today to speed response to fires on land and sea lowering claims and costs.
- The effectiveness of rapid response over land and water.
- The future of savings lives and reducing property losses during catastrophic fire and oil spill situations.

This lecture or podcast can be included as part of your CPD requirement should you consider it relevant to your professional development needs. It is recommended that you keep any evidence of the CPD activity you have completed and upload copies to the recording tool as the CII may ask to see this if your record is selected for review.
