Modern methods of construction & alteration – fire risk assessment

Date: Thursday 15 November 2018

Time: 1.15pm - 2.00pm

Speaker: Howard Passey, Principal Consultant, Fire Protection Association

This presentation considered modern construction methods and materials including those issues associated with the use of 'green' energy sources and fire engineered solutions in order that the risks to life, property and business are better understood. It reviewed current concerns regarding the competence of those engaged in the development of fire strategies and completing fire risk assessments and the steps being taken by fire and insurance industries to address.

By the end of this lecture members would have gained an insight into:

- current and emerging building technologies and the risks associated with their implementation and materials used
- the issues associated with the competence of those involved in the development of fire strategies and fire risk assessments
- the means for ensuring that both strategies and assessments are developed by competent persons and will address not only risks to life but also those associated with the protection of the premises and ongoing business viability post incident.

This lecture or podcast can be included as part of your CPD requirement should you consider it relevant to your professional development needs. It is recommended that you keep any evidence of the CPD activity you have completed and upload copies to the recording tool as the CII may ask to see this if your record is selected for review.
