Aviation Security - the UK regulators' perspective

Date: Tuesday 22 January 2019

Time: 1.10pm - 1.55pm

Speaker: Phil Dykins, Head of Aviation Security Regulation, CAA (UK)

In this IIL lecture, Phil Dykins described how aviation security regulation and compliance was undertaken within UK civil aviation, and offered thoughts about how this area might develop in the future. In his presentation, Phil explained how in the UK civil aviation represented one of the most complex and dynamic operational environments. As such it also offered an attractive, iconic target for terrorists and accordingly the protection of civil aviation from terrorist action was an extremely high priority for the UK government. Commensurate with the complexity of the environment, the UK mandated highly demanding standards of aviation security in all sectors of the UK civil aviation industry: airports, airlines, cargo and in-flight supplies. He explained how it fell to the CAA to frame regulations and to oversee industry compliance. This was done in partnership with all UK civil aviation stakeholders. This lecture aimed to set out how this aviation security oversight was achieved and how existing arrangements might be improved in the future.

By the end of this lecture, members would have gained an insight into:

- UK civil aviation is protected from terrorist attack through effective and stringent oversight by the UK civil aviation regulator.
- How aviation security policy, regulation and compliance is organised.
- How these arrangements might be improved in the future.

This lecture or podcast can be included as part of your CPD requirement should you consider it relevant to your professional development needs. It is recommended that you keep any evidence of the CPD activity you have completed and upload copies to the recording tool as the CII may ask to see this if your record is selected for review.
