

Continuing Professional Development Certificate

Aviation Cyber

Date: Wednesday 12 October 2016

Time: 1.15pm - 2.00pm

Speaker:

James Hatch, Director, Cyber Services, BAE Systems Applied Intelligence

In this IIL lecture James reviewed the cyber security risk within the aviation sector, its likely evolution and the implications for cyber insurance.

James explained that the aviation industry was subject to challenging profit margins and high safety requirements, and its participants were dependent on heavily interconnected systems to ensure they continue to operate efficiently. These factors meant that the sector was vulnerable to the continuing escalation and evolution of cyber attacks – particularly if it came to be targeted more directly. As insurance was increasingly seen as an important element in organisation's cyber risk management strategy, it was important to understand how these risks were likely to play out in practice.

By the end of this lecture, members would have gained an insight into:

- The cyber risks facing the aviation sector
- How these risks are likely to evolve in the coming years
- Implications for the use of insurance for cyber risk management

This lecture or podcast can be included as part of your CPD requirement should you consider it relevant to your professional development needs. It is recommended that you keep any evidence of the CPD activity you have completed and upload copies to the recording tool as the CII may ask to see this if your record is selected for review.
