

Continuing Professional Development Certificate

Airport / Aviation security

Date: Wednesday 04 January 2017

Time: 1.15pm - 2.00pm

Speaker:

Professor Norman Shanks, Principal Partner, NSAI Aviation Security & Business Management

In this IIL lecture Norman Shanks talked about the evolution, current and future development of global aviation security systems designed to meet the needs of a global industry service. Norman explained that historically aviation security measures have typically been developed in response to past terrorists actions, particular those impacting western interests. In the presentation, Norman recognised the ever changing demands of the aviation regulators responding to terrorist events, and how these can and should be focused on improving safety for all users without creating a fortress mentality which creates unnecessary and unwelcome constraints on the industry.

By the end of this lecture, members would have gained an insight into:

- An understanding of how the International and specific EU common rules in aviation security have evolved
- The key role that the aviation industry has in protecting its own future business interests from over regulation
- How the industry can move from a reactive, government driven, to a proactive, industry led, approach for future aviation security measures.

This lecture or podcast can be included as part of your CPD requirement should you consider it relevant to your professional development needs. It is recommended that you keep any evidence of the CPD activity you have completed and upload copies to the recording tool as the CII may ask to see this if your record is selected for review.
